

About Josh: Joshua Viers is the Executive Associate Director of the Center for Watershed Sciences, a multi-disciplinary research unit dedicated to solving California's most vexing water problems. As a watershed scientist, his research is purposefully interdisciplinary, wide-ranging, and collaborative, and includes elements of landscape ecology, restoration ecology, conservation science, climate change science, as well as water resources management and policy. He is an expert in the use of geospatial technologies, which he couples with computing informatics to improve environmental decision making and resource management. In his spare time, he likes exploring the Sierran watersheds near his home in Nevada City with his two boys (Carson, age 8, and Everett, age 5).
