

About Susan: As Sierra Project Coordinator, Susan Antenen helps the Conservation Biology Institute (CBI) serve as a “bridge” between research and decision-making relating to climate adaptation, forest management, renewable energy development, and other land uses in the Sierra Nevada. Before joining CBI in 2010, Susan worked for The Nature Conservancy for 19 years as a conservation planner and project manager in Mongolia, Maui, Hawai’i, New York and California in diverse ecosystems (coastal and estuary, temperate grasslands, tropical montane forests, and oak woodlands). In CA, she coordinated the Southern Sierra Partnership’s initiative to incorporate climate change qualitatively and quantitatively into conservation planning, presented in the *Framework for Cooperative Conservation and Climate Adaptation in the Southern Sierra Nevada and Tehachapi Mountains*. Susan is a graduate of Goddard College in Vermont and lives in Oakland, CA.
