

About Koren: Dr. Koren Nydick has been an ecologist/science coordinator with Sequoia and Kings Canyon National Parks since 2010. She coordinates and works on climate change science and adaptation projects and partnerships as well as the parks' permitted research program. Currently she co-leads the Alternative Fire Management Futures project, which is a collaborative NPS, USFS, USGS, and university project, and is coordinating the 2013 interagency Southern Sierra Adaptation Workshop. Previously, Koren was the executive director of the Mountain Studies Institute in Colorado where she collaborated with managers, scientists, educators, and local communities on climate change, air and water quality, wetland, and educational initiatives. She also served as a postdoc at Utah State University researching nutrient cycling in mountain lakes and streams. Her PhD is in ecology from Colorado State University where she investigated the ecological effects of air pollutants on high-elevation ecosystems. She has taught at a variety of levels from 8th grade to graduate students.
