

DEMONSTRATION: CALIFORNIA CLIMATE COMMONS (4H)

Deanne DiPietro, California Landscape Conservation Cooperative

The California Climate Commons (<http://climate.calcommons.org>) offers a starting point to find climate change data and related resources, information about the science that produced it, and the opportunity to communicate with others about applying climate change science to conservation in California. We will demonstrate how to navigate the Commons library and use the Commons to access data resources and communicate with the researchers who produced them. We'd also like to hear from the Southern Sierra community about their information needs and how the Commons might serve them.

Key words: Informatics, digital library, data access, climate change science
